

PISCES Navigation Run Sheet Program

GPS and Traditional Basic Installation Instructions

Installing Pisces Upgrades/Updates (Downloads) from the SYC Website

Select the SYC Website <On Water>Navigation>Pisces for Menu options.

Upgrades/updates requires Pisces already installed (see the 'Installing Pisces from Scratch' section below if not done)

**** Do NOT Un-Install PISCES ****

Some Menu options are for info, others are for downloading programs or data. If downloading, ensure your existing Pisces is NOT running (Open).

To install downloads, click the Menu option. A pop-up box will appear. Click 'Open File' and follow instructions - by-pass any security flags which may appear. Contact SYC PBC if problems occur.

Unzip the .EXE file. The unzip must be directed to your existing working PISCES folder which is assumed as being C:\PISCES or C:\PISCES\Data.

Depending on your initial 'install to' Path, change Drive or Folder to suit. Finally, click [Start] to proceed.

After unzipping (quick with no messages), run PISCES as normal.

When Pisces has loaded and begins running, select `YES' to any updating prompts (normal) unless you deliberately don't want to.

Installing Pisces from Scratch

The initial installation of Pisces is done separately from a CD/USB/SD external memory device issued by the SYC Power Boat Committee (PBC).

Separate install instructions are provided. This install will establish 'System' files on the computer. Thereafter program and data files as upgrades/updates can be downloaded from the SYC Pisces Website.

Contact the PBC to arrange the initial installation of Pisces.

Note that this install may not contain the latest Program or Data. For such, download upgrades/updates from the SYC Pisces Website as applicable.
